

### 1. Key Manufacturing Capabilities

**Production Process:** We utilize advanced Stretch Blow Molding (SBM) technology. This includes a two-step process: pre-form heating followed by high-pressure air blowing into precision molds.

**Sizes & Shapes:** Capacity to produce bottles ranging from 200ml to 2 Litres.

**Customization:** Facility for custom mold designs for unique branding, including different neck sizes (28mm, 38mm, etc.) and varied wall thicknesses.

### 2. Why Choose Our PET Bottles?

**Safety & Quality:** Manufactured using 100% BPA-free, food-grade PET resin.

**Durability:** High impact resistance and thermal stability, ensuring products remain safe during transit.

**Clarity:** Superior transparency that enhances product visibility on retail shelves.

**Sustainability:** Lightweight design to reduce carbon footprint and 100% recyclable material.

**3. Target Industrivices cater to various sectors, including:**

**Beverages:** Mineral water, carbonated soft drinks, and juices.

**Personal Care:** Shampoos, conditioners, and liquid soaps.

**Food & Condiments:** Edible oils, honey, ketchups, and sauces.

**Pharmaceuticals:** Medical syrups and antiseptic liquids.

**Home Care:** Dishwashing liquids and floor cleaners.

# CUSTOMIZE BOTTLE...

**Quality:**  
In the world of packaging, quality isn't just a standard; it's a shield for your brand and a promise to your customers. High-quality PET (Polyethylene Terephthalate) bottles are the gold standard for safety, durability, and sustainability.

Custom shapes, colors, and embossed logos create instant brand recognition. A distinctive design can increase brand recall by up to 30% compared to standard generic bottles.

**Product-Specific Engineering:** Using amber or opaque tints for light-sensitive pharmaceuticals, carbonation retention for sodas, or chemical resistance for industrial cleaners.

**Enhanced Consumer Convenience:** Designs can include ergonomic grips, or "squeezeable" for condiments and lotions.  
**Cost & Logistics**

**Optimization:** Tailoring the bottle's shape can improve stacking efficiency in warehouses, while "lightweighting" reduces plastic use and shipping fuel costs without sacrificing strength.

**Dimensional inspection:** we also carry out a check measures of product height and diameter, the exact wall thickness, perpendicularity, weight, to control once per lot.
